

Free Tool Reveal — Scrupp (LinkedIn Scraper)

A preview from the AI Tool Stack Guide: one genuinely underrated tool, revealed in depth.

Scrupp — LinkedIn Email & Phone Scraper

- What it does: a Chrome extension that pulls verified emails and phone numbers straight from LinkedIn profiles, Sales Navigator, and search results — exports to CSV/XLSX or your CRM.
- Why it's a hidden gem: it reads what's already on the page rather than using bots or the API, so it doesn't trigger the account restrictions that bot-based scrapers do.
- Use case: build a prospect list from a LinkedIn search in one click; enrich an existing list with contact info.
- How it saves money: replaces manual lead research (a ₹500-1000/hour VA task) with instant bulk export.
- Pricing: free trial with 100 leads, no card needed; paid tiers scale with volume.
- Compliance note: only scrape publicly visible data, follow LinkedIn's policies and applicable data-protection law (DPDP Act in India). Use it for legitimate B2B outreach, not spam.

The lean acquisition stack (from the full guide)

- AiSensy (WhatsApp) + Make or n8n (automation) + Scrupp (scraping) + Clay (enrichment) + Loom (video outreach) — a high-leverage stack for under ₹5,000/month.
